

Installation Instructions

Evolve Cabinets

Follow these installation instructions for Evolve upper, base, and tall cabinets with AireCore or wood composite construction.

Tools needed

- Flat head screwdriver
- Level

Preparing for cabinet installation

Step 1

Identify the location and placement of your cabinets and clean the floor and surrounding area.

Step 2

If infill panels are needed, attach infill panel directly to the inside of the cabinet with wood screws before installing cabinets.

Installation Instructions

Evolve Cabinets

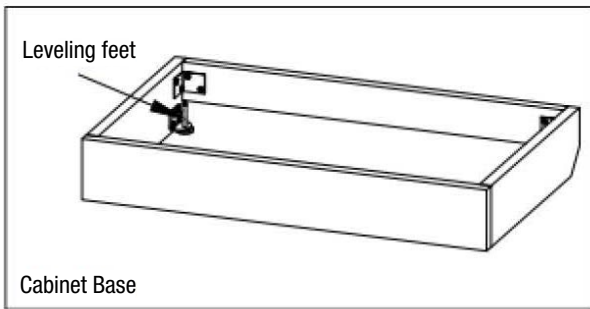

Installing a single base, tall, or scope cabinet

Step 1

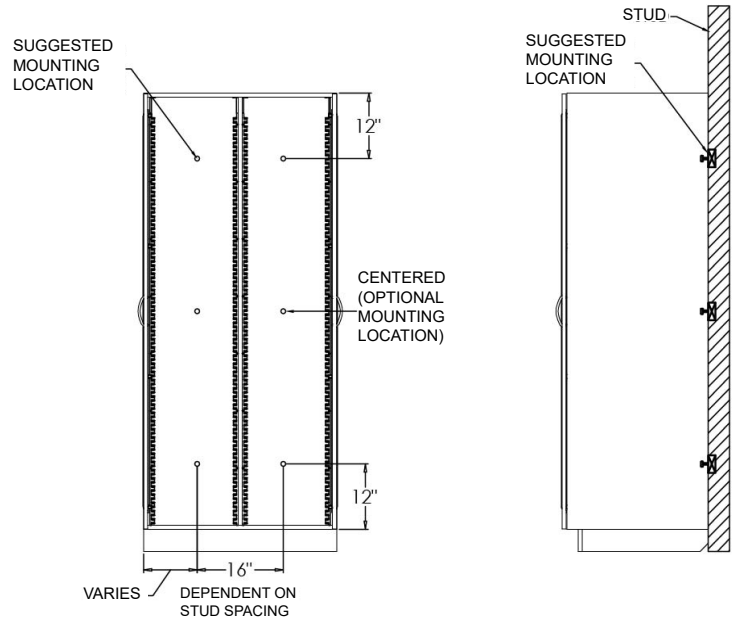

Position base against the wall. Access leveling feet inside of base, and, with a flat head screwdriver, adjust the four leveling feet until the cabinet is level.

Step 2

Mount the base directly to wall studs using appropriate fasteners for the type of wall construction.

NOTE: USE APPROPRIATE FASTENERS FOR WALL TYPE

Step 3

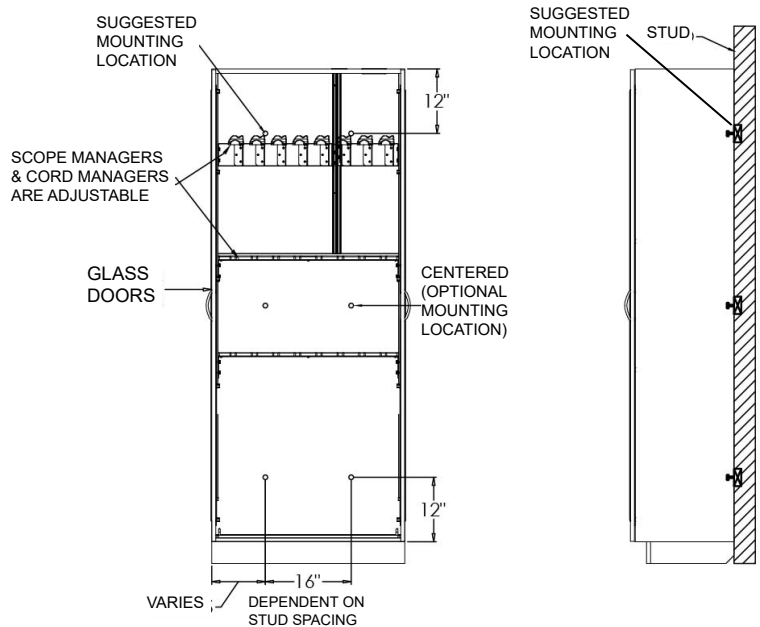

Place the cabinet onto the base.

Step 4

Plumb the cabinet and secure it to the wall through the back panel using appropriate fasteners. See figure for placement.

Installation Instructions

Evolve Cabinets

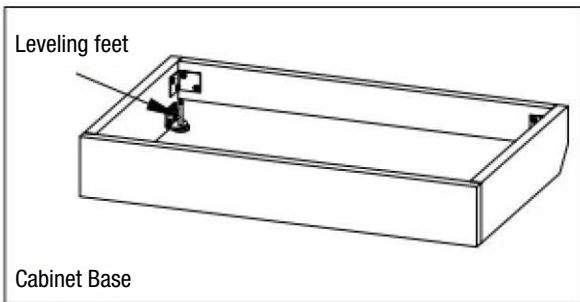

Installing multiple base, tall, and scope cabinets

Step 1

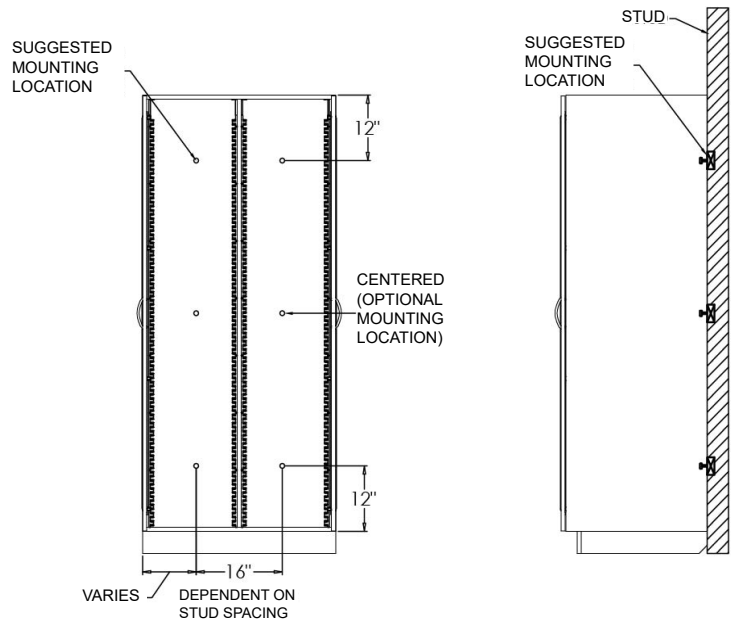

Attach the run of bases together using wood screws, making sure the bases are flush front to back and top to bottom. Position the run of bases against the wall. Access leveling feet inside of bases, and, with a flat head screwdriver, adjust the feet until the run of bases is level.

Step 2

Mount the bases directly to wall using appropriate fasteners for the type of wall construction.

NOTE: USE APPROPRIATE FASTENERS FOR WALL TYPE

Step 3

Place the end cabinet on the base. For cabinet with no finished ends or two finished ends, center the cabinet. For cabinet with one finished end, flush the adjacent cabinet and base end panels.

Step 4

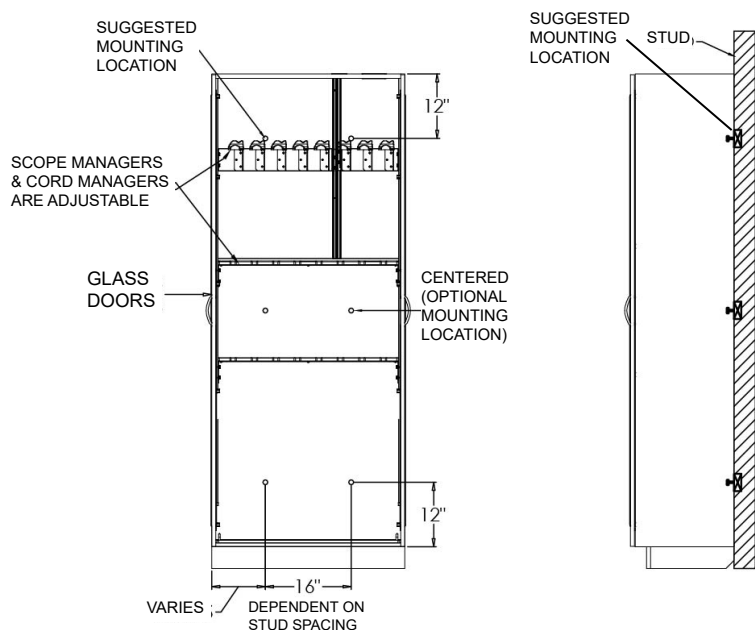

Plumb the cabinet and secure it to the wall through the back panel using appropriate fasteners. See figure for placement.

Step 5

Repeat steps 1-4 with additional cabinets, making sure each is level and plumb.

Installation Instructions

Evolve Cabinets

Installing upper wall cabinets

Step 1

Determine location of upper cabinet or cabinet run. Using a level, draw a line marking location of the bottom of the cabinet.

Step 2

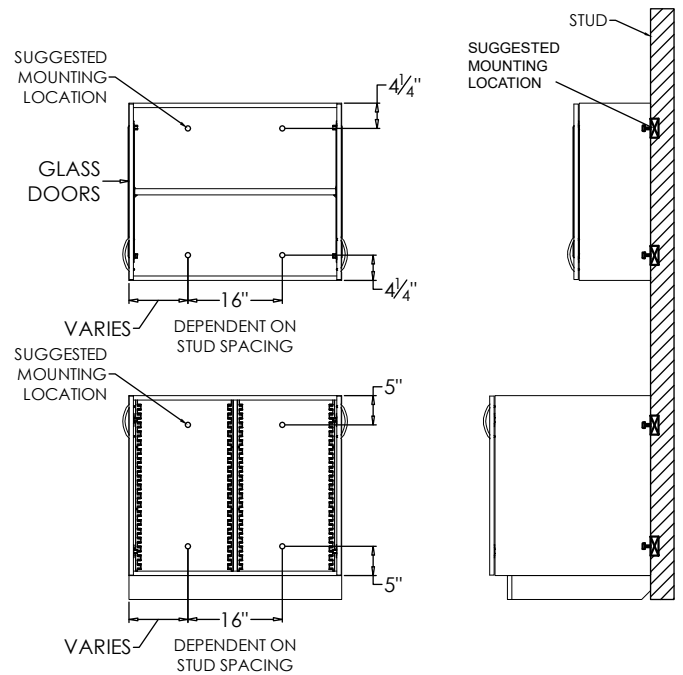

Position cabinet bottom at marked line, making sure cabinet is level and plumb, and mount the cabinet directly to wall studs using appropriate fasteners for the type of wall construction. See figure for fastener placement.

Step 3

To eliminate gaps in a cabinet run, drill pilot holes $1\frac{1}{2}$ " from the interior front edge of cabinet and $1\frac{1}{2}$ " from the inside top and bottom of cabinet. Tighten side-by-side cabinets with $1\frac{1}{4}$ " wood screws.

Installation Instructions

Evolve Cabinets Integrated Slope Top

Follow these installation instructions for Evolve integrated slope top installation.

Integrated slope tops are shipped attached to the cabinet and are attached with locking clips.

If wiring is required under the integrated slope top the top should be removed before the cabinet is installed. Taking off the integrated slope top also allows full height connection points when pulling multiple cabinets together in line-ups.

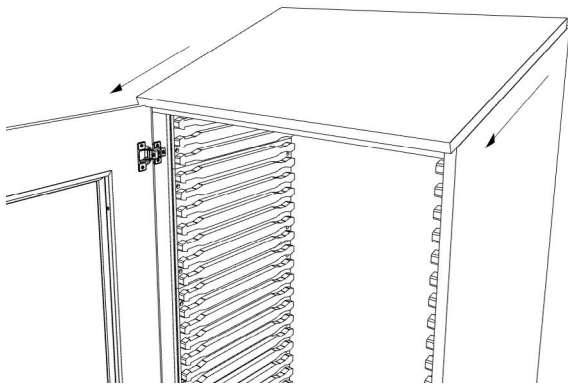

Tools needed

- Rubber Mallet
- 1 ¼" fasteners (suggested)

Step 1

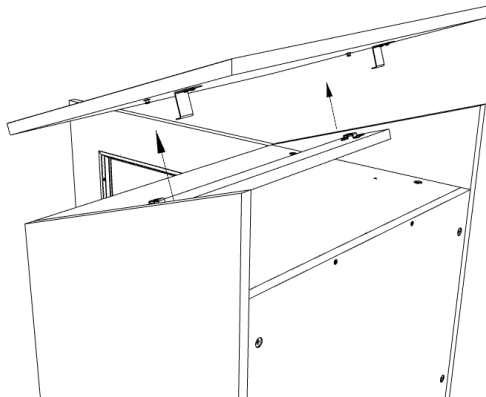

To remove the integrated slope top use the rubber mallet at the rear of the cabinet and tap the slope to release the clips.

There are two safety brackets on the integrated slope top to keep it from falling off the cabinet.

Step 2

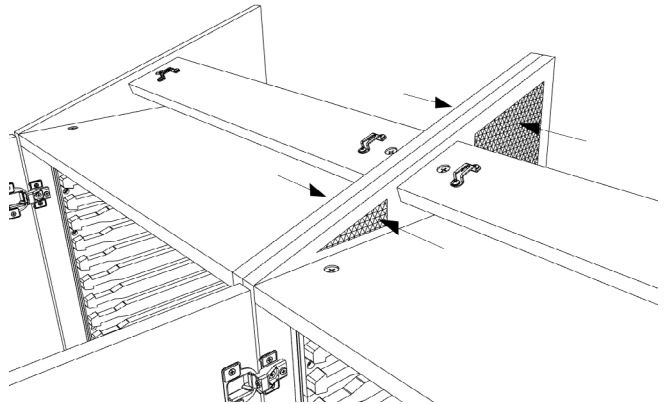

After the clips are released remove the integrated slope top from the cabinet and set aside until the cabinet is installed and all the wiring is complete.

Step 3

Cabinets can be fastened together in hatched area shown to ensure a tight fit. Fasteners not supplied.

Reattach the integrated slope top by placing the safety brackets behind the integrated slope top mounting support on the top of the cabinet.

Step 4

Center the top on the cabinet to align the locking clips push the integrated slope top back to the locking clips, using the rubber mallet tap the front of the integrated slope top edge to lock in place.
