

InnerSpace Cloud Platform for InterConnect Lock

Manage the security of your cart and cabinet fleet across your healthcare campus and satellite facilities.

Manage cart users, view access reports, and receive maintenance notifications from anywhere with InnerSpace Cloud. The InnerSpace Cloud platform is also a time saver. You no longer have to update lock information manually at each individual cart and you can upload lists of user access information.

With InnerSpace Cloud services, you can program security credentials for individual carts and cabinets or the entire fleet, proactively facilitate cart maintenance and restocking, and receive alerts for low battery and network connection. Services include device configuration and onsite and on-demand training.

A downloadable audit report tracks access, alerts, and users. You can filter the report by individual users, carts and cabinets, departments, and date and time. Data is retained in the event of a power outage and automatically uploads when power is restored. The audit trail captures up to 15,000 access attempts.

InnerSpace Cloud Services are available to customers who purchase InnerSpace® Roam and Pace carts and Evolve cabinets with hinged doors with InterConnect locks.

Check out <https://innerspacehealthcare.com/news/interconnect-lock-system/> to learn more about InterConnect Locks and InnerSpace Cloud services.

Work smarter. Manage your cart and cabinet fleet's security with the InnerSpace Cloud platform. From one location rather than at each individual cart or cabinet, you can access and update access and user security levels.
